RF EXPOSURE EVALUATION

1. PRODUCT INFORMATION

Product Description	PIR ALARM KIT
Model Name	RL-9830G4, RL-9830G, RL-9830G1
FCC ID	YI6RL-R10A

2. EVALUATION METHOD

According to 447498 D01 General RF Exposure Guidance v05

The 1-g and 10-g SAR test exclusion thresholds for 100 MHz to 6 GHz at test separation distances ≤ 50 mm are determined by:

[(max. power of channel, including tune-up tolerance, mW)/(min. test separation distance, mm)] $\cdot [\sqrt{f(GHz)}] \le 3.0$ for 1-g SAR and ≤ 7.5 for 10-g extremity SAR.

Where f(GHz) is the RF channel transmit frequency in GHz

Power and distance are rounded to the nearest mW and mm before calculation

3. CALCULATION

According to the follow transmitter output power $\ (P_t)$ formula:

 $P_t = (E \times d)^2 / (30 \times g_t)$

P_t=transmitter output power in watts

g_t=numeric gain of the transmitting antenna (unitess)

E=electric field strength in V/m

d=measurement distance in meters (m)

Pt=0.020mW

The result for RF exposure evaluation SAR=(0.020 mW /5 mm). $[\sqrt{0.434}(\text{GHz})] = 0.0026 < 3.0$ for 1-g SAR

4. CONCLUSION

The SAR evaluation is not required.
